DETAILED ACTION

Allowable Subject Matter

1. Claims 1-6 and 8 (renumbered 1-7) are allowed. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Oura (JP 2001-180234). As best depicted in Figure 1, Oura teaches a pneumatic tire construction comprising a runflat insert 9 disposed inward of a carcass structure 5 and a steel cord reinforcing layer 10 arranged along a carcass turnup portion 5b. The reference further teaches that the steel cord reinforcing layer has an end count of at least 20 cords per 50 millimeters (Paragraph 22 of attached machine translation). Based on this end count, the cords can be spaced by as much as 2.5 mm (1 cord/2.5 mm). Additionally, the filaments of said steel cord can have a diameter between 0.15 and 0.40 millimeters (Paragraph 22). While several of these parameters overlap those of the claimed invention, the shear rigidity of the sidewall portion is not solely dependent on these parameters. As correctly argued by applicant, additional parameters affect the shear plane rigidity, such as the cord material. In particular, Comparative Example 4 includes a cord interval and cord angle consistent with the claimed invention; however, the selected cord material results in a shear rigidity significantly below that required by the claimed invention. Thus, the claimed shear rigidity does not necessarily result from the disclosed construction of Oura. One of ordinary skill in the art at the time of the invention would not have found it obvious to form the runflat tire of Oura with a sidewall shear rigidity in accordance to the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
